INDEX

accounting, 3-5, 12, 32
acquisition reform, 360
activity based costing (ABC), 31, 89-100
    activities, 95
    activity cost, 96
    activity rate, 96
    definition, 89
    example, 97-99
    history, 89
    overhead allocation, 96
    steps, 95
    vs. process-flow analysis, 99
adjacency matrix, 184
administrative delay time, 350
advanced electronic power systems (AEPS), 199
analytical models, 30
availability, 332, 347-357
    achieved, 349
    calculation, 351-356
    contract clauses, 357
    costs, 357
    definition, 347-348
    inherent, 349
    instantaneous, 351
    Markov Chain calculation, 354-356
    mean, 351
    Monte Carlo calculation, 352-353
    operational, 350
    point, 351
    steady state, 351
basis of estimation (BOE), 111
Beta distribution, 353
bid, 13
binning, 47
binomial
    coefficient, 50, 128, 154
    distribution, 51
    Poisson approximation of, 51
    series, 50
bivariate distributions, 277
    bivariate lognormal, 280-281
    bivariate normal, 278-280
Bose-Einstein distribution, 57
Bradley M-2, 262, 328
burden, (see overhead)
can not duplicate (CND), 175
capability index, (see process capability index)
capacity, 38-40
capital allocation problem, 16
capital cost, 73, 84
change-over costs, 74, 85
chip, (see integrated circuit)
COCOMO, 311-315
commercial off the shelf (COTS), 360, 364
conceptual design, 13, 31, 261
conditional expectation, 392-393
conditional probability distributions, 277
confidence interval, 251
conversion matrix, 117-118, 148-151
    example, 120-122
cost
    conditioned on schedule, 277, 282
    definition, 10
    manufacturing, 29-33
    modeling, 6
cost estimating relationship (CER), 104-107
    cost-to-cost, 105
    cost-to-noncost, 105
    strengths and weaknesses, 106-107
cost of ownership (COO), 31, 69-87
    applicability, 70
    contributions to, 72
    definition, 69, 83
    embedded passive example, 79-82
    fundamental algorithm, 71, 83
    history, 83
    machine comparison example, 76-79
cycle time, 38
    penalty, 75, 86
defects, 11, 37, 58
    accumulating, 59
    clustered, 53, 56
    conservation, 118, 122
    coverage, 151-152
    definition, 47, 114, 147
    density, 52, 54, 59
    fatal, 48
    gross, 47
    level, 131-132, 155-156
    metrology, 48
    parametric, 47
    random, 47
    size distribution, 49
    spatial distribution, 49, 52-56
    spectrum, 116-122, 148-151
depreciation, 21, 39
design, 13, 31
    costs for chips, 295-306
    design cost example, 300-306
    design for test, 145
    design to cost, 11
    efficiency, 448
Index

re-spin, 299
reuse, 298
software design, (see software)
design for environment (DFE), 405-413, 415-416
definition, 405, 409
disassembly, 441-456
drivers, 410
environmental impact, 408-409
life cycle assessment (LCA), 415-439
master equation, 407-408
salvage, 457-465
design refresh planning, 372-377
diagnosis, 189-190
definition, 115, 125, 189
diagnostic length, 190
diagnostic test, 190
diagnostic tree, 190
die (bare die), 49, 52
cost, 34, 103
defect density, 58
size, 58, 102, 169
yield, 34, 202
Dirac delta function, 54
disassembly, 441-456
accessibility, 447
difficulty scores, 445-449
energy calculations, 449-450
entropy calculations, 451-456
irreversible, 442
Maynard operational sequence technique (MOST), 448
paths, 455
reversible, 442
time, 443-444
work, 444
down time, 350
DRAM, 274
economic equivalence, 19
economist, 4, 5
electronic part obsolescence, (see obsolescence)
embedded passives, 79
emulation, 30
end of life, 13
disassembly, 441-456
salvage, 457-465
energy, 37
engineering economics, 3, 9, 15-28
bridge building example, 23-25
guaranteed pre-paid tuition example, 26-27
equipment cost, 39
erroneous coverage, 140
error function, 56
evaluating assets, 20
exponential distribution, 56, 335, 342-343
F-16, 262, 328
failures avoided, 403
fallout, 35, 37
false positives, 138, 159-162
fault, 11, 47, 49, 52, 114, 147
coverage, 122-124, 127, 129, 132-133, 151-153, 156
coverage relation to test cost, 185
dictionary, 190
efficiency, 151
spectrum, 116-122, 148-151
types, 116
feature points, 320
fixed cost, (see non-recurring cost)
flat panel display, 459-465
flip chip bonding, 292-294
function point analysis, 315-321
adjusted function point count (FP), 317
counting, 316
element, 319-320
relationship to SLOC, 318
technical complexity factor (TCF), 317
unadjusted function point count (UFC), 316
weaknesses, 321
functional block, 297
gate count, 102
half Gaussian distribution, 56
hazard function, 386
heuristics, 30
hierarchy (of modeling), 30
hypergeometric distribution, 128, 154
income taxes, 22
indirect cost, (see overhead)
industrial ecology, 9, 417
inflation, 22
insertion, (see technology insertion)
integrated circuit (IC),
cost, 70
design costs, 295-306
lifecycle, 362
reusable blocks, 300
intellectual property (IP), 297
library, 303-304
interest, 18-19
joint probability distribution, 277
known good die (KGD), 63-64
literature, 38
cost, 32, 38, 73, 81
rate, 38
learning curves, 40, 207-240
  block data, 218-220, 232-234
  Boeing model, 209
  comparison of cumulative and unit, 229-230
  Crawford model, 209
  cumulative average, 211, 225-226
defect density learning, 237
definition, 207
deJong, 223
determining, 216-222, 230-234
definition, 209
history, 208, 223
industrial learning, 207
iterative midpoint method, 221-222
learning index, 208, 224, 228
learning rate, 209, 225, 228
log-linear, 223
management learning, 207
marginal model, 226
midpoint formula, 214-215, 228-229
Northrop model, 210
operator learning, 207
S-curve, 224
slide property, 212, 227
sources, 216
Stanford-B, 223
unit curve, 213, 225
Wright model, 210
yield, 234-237
least squares, 217, 232
life cycle,
  application service life, 363
cost analysis (LCC), 9, 261-263
definition, 11, 261
DRAM, 368
tables, 262
mismatch, 363
overlap, 274
phases, 327, 329, 366-367
product, 13, 362

technology, 362
life cycle assessment (LCA), 415-439
boundaries, 419
definition, 415, 416
goal and scope, 419-420
history, 417
impact, 418, 431-435
improvement and interpretation, 418, 436
inventory, 418, 420-431
ISO standards, 438
material centric model, 421-431
process flow model, 421-431
scope, 417
strengths and weaknesses, 437
lifetime buy, 370-372
logistic down time, 350
lost opportunity costs, 74
maintenance and maintainability, 325
corrective, 350
cost models, 400
definition, 348
fixed scheduled maintenance interval, 401-403
preventative, 350
scheduled maintenance, 73, 81, 400-403
unscheduled maintenance, 73, 81, 400-403
manufacturability, 2
manufacturing cost models, 29-33
market window, 265-283
marketing, 13
Markov chains, 354-356
  transition matrix, 355
  transition probability, 354
mass, 37
material,
  content, 37
cost, 31, 39
  waste, 37
material centric model, 421-431
additive, 421-422
scrapping, 421-423
subtractive, 421-422
waste disposition, 423
Maynard operational sequence technique (MOST), 448
mean, 250
mean time between failure (MTBF), 335, 349, 400
mean time to repair (MTTR), 349, 400
minimal repair, 386
mitigation of obsolescence cost analysis (MOCA), 375-377
Monte Carlo analysis, 241-259
  availability calculation, 352-353
  Latin hypercube sampling (LHS), 255-259
sample size, 250-252
  sampling a distribution, 245
  stratified sampling, 255
triangular distribution, 253-254
Moore’s law, 298-299
multichip module (MCM), 183
multivariate probability theory, 276
Murphy yield model, 55-57
Negative binomial distribution, 57
net present value (NPV), 20, 374
non-recurring cost, 5, 10, 71, 398
non-stationary process, 393
number-up, 40, 103
object points, 321
obsolescence, 359-378
  causes, 361-363
